## EDUCATION

### SRM University, AP

*Bachelor of Technology in Computer Science and Engineering*

Amaravati, India

2021 – 2025

- **Gold Medalist** | CGPA 9.40/10.0 | Rank 1, Big Data Analytics Specialization

## EXPERIENCE

### Software Development Engineer (SDE-1)

*Darwinbox*

July 2025 – Aug. 2026

*Hyderabad, India*

- Drove multi-phase migration of the audit trail system to a dedicated microservice across 65+ entity models, over three releases, with zero disruption to production audit coverage.
- Refactored the location provisioning pipeline from a scheduled CRON to real-time event-driven creation, eliminating a critical implementation bottleneck.
- Contributed to the design and delivery of Effective Date History, enabling point-in-time employee data snapshots.
- Designed and delivered an automated Template Permission Role system for tenant-level HR access control, streamlining permission configuration across organizational hierarchies.
- Diagnosed and resolved critical defects across multiple bulk data import modules, improving pipeline reliability for employee and organizational record ingestion.
- Implemented Multi-Language Framework (MLF) support to strengthen i18n completeness for enterprise multilingual deployments.
- Delivered features across sprint cycles in an Agile squad, covering design, implementation, testing, and deployment.

### Product Development Intern

*Darwinbox*

Jan. 2025 – June 2025

*Hyderabad, India*

- Built a simulation framework for custom automation workflows using Next.js, enabling preview of workflow behavior against production-equivalent configurations before live deployment.

## PROJECTS

### NexusPay | *Java, Spring Boot, PostgreSQL, Next.js, TypeScript*

[Link to Project](#)

- Designed a 3-component UPI-inspired PSP ecosystem: a mobile-first PWA, a decoupled Sandbox Bank portal, and a Spring Boot routing engine, modeling the UPI 4-party architecture (PSP → Switch → Core Banking System).
- Engineered an ACID-compliant transaction engine with pessimistic row-level locking, guaranteeing zero double-spend under concurrent load.
- Enforced at-most-once debit semantics via client-side UUID idempotency keys, covering duplicate charges across network retries.
- Applied zero-trust at the transaction layer: sender identity always extracted from validated JWT, never the request body, eliminating IDOR vulnerabilities.
- Implemented a 5-state frontend state machine for deterministic recovery from network drops.

## TECHNICAL SKILLS

**Languages:** Java, TypeScript, JavaScript, Python, SQL

**Frameworks:** Spring Boot, Node.js, Next.js, React

**Databases:** PostgreSQL, MongoDB, MySQL

**Tools:** Git, GitHub Actions, Maven, AWS

**Concepts:** ACID Transactions, Concurrency Control, Event-Driven Architecture, REST API Design, System Design

## CERTIFICATIONS

**AWS Certified Cloud Practitioner**

**PCAP-31-03 – Certified Associate in Python Programming**

## ACHIEVEMENTS & ENGAGEMENTS

**Amazon ML Summer School 2024** — Participant — Instructor-led sessions on ML, DL, GenAI, and LLMs

**Founder's Scholarship, SRMIST** — Recipient — AIR 33 in SRMJEEE among 2+ Lakh candidates
