EDUCATION

SRM University, AP

Bachelor of Technology in Computer Science and Engineering

Amaravati, India

2021 – 2025

- **Gold Medalist** | CGPA 9.40/10.0 | Rank 1, Big Data Analytics Specialization

EXPERIENCE

Software Development Engineer (SDE-1)

July 2025 – Aug. 2026

Darwinbox

Hyderabad, India

- Drove multi-phase migration of the audit trail system to a dedicated microservice across 65+ entity models, over three releases, with zero disruption to production audit coverage.
- Refactored the location provisioning pipeline from a scheduled CRON to real-time event-driven creation, eliminating a critical implementation bottleneck.
- Contributed to the design and delivery of Effective Date History, enabling point-in-time employee data snapshots.
- Designed and delivered an automated Template Permission Role system for tenant-level HR access control, streamlining permission configuration across organizational hierarchies.
- Diagnosed and resolved critical defects across bulk data import modules for employee and organizational record ingestion.
- Implemented Multi-Language Framework (MLF) support to strengthen i18n coverage for multilingual enterprise deployments.

Product Development Intern

Jan. 2025 – June 2025

Darwinbox

Hyderabad, India

- Built a simulation framework for custom automation workflows using Next.js, enabling preview of workflow behavior against production-equivalent configurations before live deployment.

PROJECTS

Halflife | *PyTorch, FastAPI, NumPy, Next.js, TypeScript, PostgreSQL*

[Live](#) | [Source](#)

- Built a spaced-repetition app scheduled by a half-life regression model (Settles & Meeder, ACL 2016), ported to PyTorch and trained on 12.85M Duolingo reviews, benchmarked against Leitner, SM-2 and logistic regression.
- Found the traces carry little spacing signal (153 vs SM-2's 86 reviews/day at 90% retention), so shipped SM-2 as default with the model in shadow and a monthly retrain that promotes weights by PR when log-loss improves.
- Served the model from a FastAPI function on Vercel with a parity-tested TypeScript fallback; self-hosted username/password auth with no email collected; Lighthouse 100 for accessibility, best practices and SEO.

MF Compass | *Next.js, React, TypeScript, PostgreSQL, Drizzle ORM, GitHub Actions*

[Live](#) | [Source](#)

- Ranks 312 direct-growth Indian mutual funds across 9 categories by weighted outperformance against their category average, normalised within category, with an asymmetric penalty on negative returns.
- Daily and weekly GitHub Actions syncs with schema-validated responses feed Neon Postgres; ISR pages and an in-memory search index keep queries under 5 ms with no third-party call at request time.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Java, SQL

Frameworks: Node.js, Next.js, React, FastAPI, PyTorch

Data & Tools: PostgreSQL, MongoDB, MySQL, Git, GitHub Actions, Vercel, AWS

Concepts: ACID Transactions, Concurrency Control, Event-Driven Architecture, REST API Design, System Design

CERTIFICATIONS

AWS Certified Cloud Practitioner

PCAP-31-03 – Certified Associate in Python Programming

ACHIEVEMENTS & ENGAGEMENTS

Amazon ML Summer School 2024 — Participant — Instructor-led sessions on ML, DL, GenAI, and LLMs

Founder's Scholarship, SRMIST — Recipient — AIR 33 in SRMJEEE among 2+ Lakh candidates
